

CASE STUDY - DISPLAYLINK

PROJECT: DISPLAYLINK, Cambridge Science Park
DURATION: 12 weeks
SIZE: 20,450 square feet
OCCUPANCY: Office & Electronic Laboratories

Displaylink needed to relocate offices and in the process wanted to both plan for expansion and ensure staff retention. 140 Cambridge Science Park offered newly refurbished office space with clear options for subletting.

We were employed as Design and Project Management Consultants to take the project from inception to completion. The brief for the office space was to maintain and reinforce strong interdepartmental links and support collaboration wherever possible. We added write on finishes to both walls and storage and even introduced write on boundary walls to main circulation routes to maximise opportunities to collaborate.

The overall cost of the project was meticulously tracked to ensure best value at all times and a careful eye considered all elements that could be reused.

A large and flexible client facing meeting suite was included on the ground floor along with an expansive and relaxing breakout area with space for games as well as eating.

"We provided Carol with lots of ideas with which to design our new office and had a clear strategy and expectation of what we wanted. The Workspace Consultants made sure that we achieve our goal on time and on budget."

Ian Stacey, Vice President, Silicon Engineering & Operations, Displaylink

CASE STUDY - DISPLAYLINK

PROJECT: DISPLAYLINK, Cambridge Science Park
DURATION: 12 weeks
SIZE: 20,450 square feet
OCCUPANCY: Office & Electronic Laboratories

We were tasked with specifying contemporary furniture solutions for the client facing spaces and with updating the existing desking solution to compliment the design. The furniture packages have been harmonised to enhance a generally monochromatic design by adding colour and texture. Meeting areas and rooms have been provided to support internal and external meetings, these provide several Video & Tele Conferencing facilities for communication with partner offices as well as supporting internal and client facing meetings.

All office areas were also designed for maximum flexibility, to work both on one floor or two, this allows the business to react appropriately as the market dictates.

The Workspace Consultants helped us to source and tender the furniture package to ensure the right design and best value, they also remained on hand throughout the installation period which was really helpful."

Adrienn Rusz, Facilities Manager, Displaylink
